

I am asking the FCC to reject the NAB's petition 04-160 and to consider my right to get services that are much needed to me and my family in XM Radio. I benefit from XM's traffic and weather because my company is a construction company that is Central Florida based and XM covers my particular area in weather. I also travel quite a bit on Interstate, and that highway can be a nightmare to travel on if the most up to date, proper information is given on a continuous update. XM provides this and I can also receive their signal in my new car that does not receive A.M. signals. No local station will report as accurate or as timely as XM and I wish to continue these operations, so I am asking you to deny any request to prohibit any signal I receive as a paying subscriber.
